- Advance prevention and early intervention

The Need

- Over 60% of Californians have **experienced negative and harmful childhood events** that threaten their development, health and longevity; the majority of which are preventable. (January 2020)
- The Healthy Minds Study found the **prevalence of depression and anxiety** in young people continues to increase, now reaching its highest levels, a sign of the **mounting stress factors** due to the coronavirus pandemic, political unrest, and systemic racism and inequality. (February 2021)
- **Involuntary psychiatric detentions have risen sharply** over the past decade, according to a new study by researchers at the UCLA Luskin School of Public Affairs. (November 2020)
